

ABSTRACT OF THE DISCLOSURE

A foot spa and a method for controlling the foot spa is
5 provided. The foot spa has a housing defining a reservoir for
retaining a volume of fluid, and a lid selectively covering a
portion of the reservoir. The foot spa can have any combination
of a remote control unit for generating a signal for controlling a
plurality of functions of the foot spa, a receiver for receiving
10 the control signal, a retractable cord, an infrared heater, an in-
line fluid heater, adjustable fluid jets, a spinning massage
attachment function, and a control assembly operable by the foot
of the user.
